Decline, Renewal and the City in Popular Music Culture: Beyond the Beatles Sara Cohen. 2017-09-29 How is popular music culture connected with the life, image, and identity of a city? How, for example, did the Beatles emerge in Liverpool, how did they come to be categorized as part of Liverpool culture and identity and used to develop and promote the city, and how have connections between the Beatles and Liverpool been forged and contested? This book explores the relationship between popular music and the city using Liverpool as a case study. Firstly, it examines the impact of social and economic change within that city on its popular music culture, focusing on de-industrialization and economic restructuring during the 1980s and 1990s. Secondly, and in turn, it considers the specificity of popular music culture and the many diverse ways in which it influences city life and informs the way that the city is thought about, valued and experienced. Cohen highlights popular music's unique role and significance in the making of cities, and illustrates how de-industrialization encouraged efforts to connect popular music to the city, to categorize, claim and promote it as local culture, and harness and mobilize it as a local resource. In doing so she adopts an approach that recognizes music as a social and symbolic practice encompassing a diversity of roles and characteristics: music as a culture or way of life distinguished by social and ideological conventions; music as sound; speech and discourse about music; and music as a commodity and industry.

Successful Strategies for Computer-assisted Reporting Bruce Garrison. 2013-10-18 Computers have changed the landscape of both gathering and disseminating information throughout the world. As journalists quickly move toward the 21st century and perhaps, a new era of electronic journalism, resources are needed to understand the newest and most successful computer-based news reporting strategies. Written to serve that purpose, this book is designed to show both professional journalists and students which of the newest personal computing tools are being used by the nation's leading news organizations and top individual journalists. It further describes how these resources are being used on a daily basis and for special projects. In recent years, computers have taken on new and dominating roles in the process of news analysis, newsgathering, and news processing. Today's forward-thinking journalists often seek guidance over what they can do to strengthen their ability to be society's information processors and managers. This volume focuses upon how successful journalists are using computers through a major national computer-assisted reporting (CAR) study of daily newspapers. The study included two national surveys and a series of personal interviews with many of the nation's leading CAR specialists. Several current examples of stories used for successful database- and online-oriented news assignments are provided as part of a series of case studies incorporated throughout the book. The additional depth of description and the presentation of portions of stories themselves should help readers to understand the complete process involving CAR-oriented journalism. Substantial analytical detail is used to discuss the extent of computer use in newsrooms, computer training, CAR projects, CAR in daily reporting, hardware and software most commonly used, levels and types of online services used in news research, and portable hardware and software. The book concludes with the author's assessment of the effects and impact of personal computing in the newsroom and the future of personal computer applications in newsgathering. Explaining and

defining advanced applications or terminology for readers, the approach to the book assumes a minimal familiarity with computers, but no advanced knowledge of computer operation.
