Banded Vegetation Patterning in Arid and Semiarid Environments David J. Tongway,Christian Valentin,Josiane Seghieri.2012-09-09 Aerial photography has revealed the striking, widespread phenomenon of repeating patterns of vegetation in more arid areas of the world. Two interdependent phases, bands of dense and sparse vegetation, alternate in the landscape. This volume synthesizes half a century's accumulated knowledge of both theoretical and applied landscape function from a variety of these regions. It covers structure, dynamics, and methods of study, as well as disturbances to these landscapes and relevant management issues. Various chapters discuss the role of modeling in answering questions about the origins and complex processes of banded landscapes.

The Wild Oryza Genomes Tapan K. Mondal,Robert J. Henry.2018-02-15 This book focuses on the latest genome sequencing of the 25 wild Oryza species, public and private genomic resources, and their impact on genetic improvement research. It also addresses the untapped reservoir of agronomically important traits in wild Oryza species. Rice is a model crop plant that is frequently used to address several basic questions in plant biology, yet its wild relatives offer an untapped source of agronomically important alleles that are absent in the rice gene pool. The genus Oryza is extremely diverse, as indicated by a wide range of chromosome numbers, different ploidy levels and genome sizes. After a 13-year gap from the first sequencing of rice in the 2002, the genomes of 11 wild Oryza species have now been sequenced and more will follow. These vast genomic resources are extremely useful for addressing several basic questions on the origin of the genus, evolutionary relationships between the species, domestication, and environmental adaptation, and also help to substantiate molecular breeding and pre-breeding work to introgress useful characters horizontally from wild species into cultivated rice.

Monk and Mason on the Tigris Frontier Andrew Palmer.1990-04-12 Tur cAdin is a plateau skirted by the Upper Tigris in south-eastern Turkey. Syrian Orthodox Christians of Aramaic tongue still worship in its Late Antique churches. Monks converted the region and the most powerful monastery, founded in the fourth century, is still flourishing today. This book grew out of an attempt to document more fully the early history of this abbey. It aims to rediscover the practical and symbolic function of the monuments of Tur cAdin and place them in their original social context. A recurring

theme is the relationship between village and monastery and, within each, between community and individual. The final chapters also contribute to our understanding of the Syrian Orthodox community under the Abbasid caliphate. A 500-page microfiche supplement contains the first editions of the Qartmin Trilogy, a monastic text to which the book refers, constantly, and the Book of Life, a unique quasi-epigraphical document of a Christian village and its will to survive.

Swiss National Forest Inventory – Methods and Models of the Fourth Assessment Christoph Fischer, Berthold Traub. 2019-09-24 The Swiss National Forest Inventory (NFI) is a forest survey on national level which started in 1982 and has already reached its 5th survey cycle (NFI5). It can be characterized as a multisource and multipurpose inventory where information is mainly collected from terrestrial field surveys using permanent sample plots. In addition, data from aerial photography, GIS and forest service questionnaires are also included. The NFI's main objective is to provide statistically reliable and sound figures to stakeholders such as politicians, researchers, ecologists, forest service, timber industry, national and international organizations as well as to international projects such as the Forest Resources Assessment of the United Nations. For Switzerland, NFI results are typically reported on national and regional level. State of the art methods are applied in all fields of data collection which have been proven to be of international interest and have even served as a basis for other European NFIs. The presented methods are applicable to any sample based forest inventory around the globe. In 2001 the Swiss NFI published its methods for the first time. Since then, many methodological changes and improvements have been introduced. This book describes the complete set of methods and revisions since NFI2. It covers various topics ranging from inventory design and statistics to remote sensing, field survey methods and modelling. It also describes data quality concepts and the software framework used for data storage, statistical analysis and result presentation.

The Doctrine of Vibration Mark S. G. Dyczkowski. 1989 Cutting across distinctions of schools and types, the author explains the central feature of Kashmir Saivism: the creative pulse of the all-pervasive Consciousness called Siva. This is also the central theme of the Hindu Tantras, and Dyczkowski provides new insight into the most literate and extensive interpretations of the Tantras. This book is significant from four points of view. First, it breaks new ground in Indian philosophy. According to the Spanda Doctrine, the self is not simply witnessing consciousness as maintained by Sankhya and Vedanta, but is an active force. Second, the ultimate reality is not simply a logical system of abstract categories, but is living, pulsating energy, the source of all manifestation. Third, the work elaborates the dynamic aspect of consciousness. It supplies an excellent introduction to the texts and scriptures of Kashmir Saivism. Fourth, it suggests a Yoga for the realization of self.

Terror of the Radiance Richard Jude Thompson. 2013 Richard-Jude Thompson investigates Martin Noth's conclusion about the Deuteronomistic History (DH) that the people of Israel had committed apostasy ceased to obey the law code of Yhwh, and thus lost their land. Scholars have challenged Noth's hypothesis and even the existence of such a history. The present study adopts a thematic reading of the DH as a coherent corpus of writing with a consistent message. A close reading reveals a god, Yhwh, who declares war on other gods and commands his followers to conquer and to sanctify the mountain of the Emorites and the land of Canaan to Yhwh. The sanctification includes the killing of the people living there: When you attack them, you shall annihilate them entirely. Do not make a treaty with them and do not show mercy to them. Throughout the DH, Yhwh and

his spokespersons reward obedience and punish disobedience. Because the disobedient people of Israel fail to enforce Yhwh's command to remove the nations of Canaan, Yhwh enforces imperial law and sentences them to national death and exile. The author hypothesizes that the DH depicts an imperial, military covenant. After a survey of the inscriptions of the second-millennium b.c.e. Levant, the Hittite empire, the Neo-Assyrian empire, and the first-millennium b.c.e. Levant, the study concludes with a hypothesis that the evidence points to the ideology of the Neo-Assyrian empire as the historical precedent for the Dtr covenant. The study challenges two presuppositions that underlie both the DH and its scholarship: that of the torahas law and that of Yhwh as a unique god.

Global Re-introduction Perspectives Pritpal S. Soorae. 2010 This is the second issue in the Global Re-introduction Perspectives series and has been produced in the same standardized format as the previous one. The case-studies are arranged in the following order: Introduction, Goals, Success Indicators, Project Summary, Major Difficulties Faced, Major Lessons Learned, Success of Project with reasons for success or failure. For this second issue we received a total of 72 case-studies compared to 62 in the last issue. These case studies cover the following taxa as follows: invertebrates (9), fish (6), amphibians (5), reptiles (7), birds (13), mammals (20) and plants (12) ... We hope the information presented in this book will provide a broad global perspective on challenges facing re-introduction projects trying to restore biodiversity.--Pritpal S. Soorae.

Tun-huang Popular Narratives Victor H. Mair. 1983-11-10 *Tun-huang Popular Narratives* presents authoritative translations of four vernacular Chinese stories, taken from fragmentary texts usually referred to as pien-wen or 'transformation texts'. Dating from the late T'ang (618-907) and Five Dynasties (907-959) periods, the texts were discovered early last century in a cave at Tun-huang, in Chinese Central Asia. However, written down in an early colloquial language by semi-literate individuals and posing formidable philological problems, the texts have not been studied critically before. Nevertheless they represent the only surviving primary evidence of a widespread and flourishing world of popular entertainment during these centuries. The tales deal with both religious (mostly Buddhist) and secular themes, and make exciting and vivid reading.

Microbial Activity in the Rhizosphere Krishna Gopal Mukerji, C. Manoharachary, Jagjit Singh. 2006-03-22 The rhizosphere is a very complex environment in which the effects of the plant on soil microorganisms and the effects of the microorganisms on the plant are interacting and are

interdependent. Plant root exudates and breakdown products attract microbes and feed them and, in turn, the plants often benefit from the microbes. Interactions among microorganisms and plant roots are essential for nutritional requirements of the plant. Plant growth, development and productivity are largely dependent on the soil environment in the root region rhizosphere. The new techniques of studying the rhizosphere enables us to get a much better understanding of the dynamics of the rhizosphere population, such rhizosphere studies being of interest to agriculturists, soil biologists, chemists, microbiologists and molecular biologists. The rhizosphere microbes influence the root environment in several ways. They may change the oxidation-reduction potential, influence the availability of moisture and nutrients, produce growth inhibiting or growth promoting substances in the form of exudates, provide competition and possibly induce many other effects. Mycorrhizal associations are beneficial in mineral uptake and in increasing root surface area for effective ion absorption. Antagonism, competition and synergism in soil and the rhizosphere are the most important microbial interactions to consider in the study of rhizosphere biology. With the growing information on the production of growth regulators, competitiveness of the microbes in the rhizosphere, microsymbionts, and other factors, their effect upon plant growth will become more evident. Experiments on the introduction of microbes or their products in the rhizosphere will help to improve our understanding of the biology of the rhizosphere.

An Introduction to Indian Philosophy Satischandra Chatterjee, Dhirendramohan Datta.2016-01-01 The object of this book is to provide a simple introduction to the Indian systems of philosophy. Each one of these systems has had a vast and varied development. An attempt has been made to introduce the reader to the spirit and outlook of Indian philosophy and help him to grasp thoroughly the central ideas rather than acquaint him with minute details. Modern students of philosophy feel many difficulties in understanding the Indian problems and theories. Their long experience with university students has helped the authors to realise these, and they have tried to remove them as far as possible. This accounts for most of the critical discussions which could otherwise have been dispensed with. The book has been primarily written for beginners. The first chapter which contains the general principles and basic features of Indian philosophy, as well as a brief sketch of each system, gives the student a bird's-eye view of the entire field and prepares him for a more intensive study of the systems which are contained in the following chapters. It is hoped, therefore, that the book will suit the needs of university students at different stages, as well as of general readers interested in Indian Philosophy.

Applications of Membrane Computing in Systems and Synthetic Biology Pierluigi Frisco, Marian Gheorghe, Mario J. Pérez-Jiménez.2013-12-17 Membrane Computing was introduced as a computational paradigm in Natural Computing. The models introduced, called Membrane (or P) Systems, provide a coherent platform to describe and study living cells as computational systems. Membrane Systems have been investigated for their computational aspects and employed to model problems in other fields, like: Computer Science, Linguistics, Biology, Economy, Computer Graphics,

Robotics, etc. Their inherent parallelism, heterogeneity and intrinsic versatility allow them to model a broad range of processes and phenomena, being also an efficient means to solve and analyze problems in a novel way. Membrane Computing has been used to model biological systems, becoming with time a thorough modeling paradigm comparable, in its modeling and predicting capabilities, to more established models in this area. This book is the result of the need to collect, in an organic way, different facets of this paradigm. The chapters of this book, together with the web pages accompanying them, present different applications of Membrane Systems to Biology. Deterministic, non-deterministic and stochastic systems paired with different algorithms and methodologies show the full potential of this framework. The book is addressed to researchers interested in applications of discrete biological models and the interplay between Membrane Systems and other approaches to analyze complex systems.
