

American Astrophilately The First 50 Years

Stamping the Earth from Space Renato Dicati. 2017-01-10 This unique book presents a historical and philatelic survey of Earth exploration from space. It covers all areas of research in which artificial satellites have contributed in designing a new image of our planet and its environment: the atmosphere and ionosphere, the magnetic field, radiation belts and the magnetosphere, weather, remote sensing, mapping of the surface, observation of the oceans and marine environments, geodesy, and the study of life and ecological systems. *Stamping the Earth from Space* presents the results obtained with the thousands of satellites launched by the two former superpowers, the Soviet Union and the United States, and also those of the many missions carried out by the ESA, individual European countries, Japan, China, India, and the many emerging space nations. Beautifully illustrated, it contains almost 1100 color reproductions of philatelic items. In addition to topical stamps and thematic postal documents, the book provides an extensive review of astrophilatelic items. The most important space missions are documented through event covers and cards canceled at launch sites, tracking stations, research laboratories, and mission control facilities.

Stamping American Memory Sheila Brennan. 2018-06-15 Winner of the University of Michigan Press / Humanities, Arts, Science, and Technology Alliance and Collaboratory (HASTAC) Prize for Notable Work in the Digital Humanities In the age of digital communications, it can be difficult to imagine a time when the meaning and imagery of stamps was politically volatile. While millions of Americans collected stamps from the 1880s to the 1940s, *Stamping American Memory* is the first scholarly

examination of stamp collecting culture and how stamps enabled citizens to engage their federal government in conversations about national life in early-twentieth-century America. By examining the civic conversations that emerged around stamp subjects and imagery, this work brings to light the role that these underexamined historical artifacts have played in carrying political messages. Sheila A. Brennan crafts a fresh synthesis that explores how the US postal service shaped Americans' concepts of national belonging, citizenship, and race through its commemorative stamp program. Designed to be saved as souvenirs, commemoratives circulated widely and stood as miniature memorials to carefully selected snapshots from the American past that also served the political needs of small interest groups. *Stamping American Memory* brings together the histories of the US postal service and the federal government, collecting, and philately through the lenses of material culture and memory to make a significant contribution to our understanding of this period in American history.

Space Patrick Moore,H. J. P. Arnold.2007 A half-century ago, mankind's journey to the stars began with the launch of Sputnik 1. Sir Patrick Moore, the world's most famous amateur astronomer, and space photographer HJP Arnold have combined their talents to chronicle this entire exciting period. Featuring the finest images beautifully reproduced, it relives all the amazing advances and discoveries, from the first manned spaceflight to the first moon landing, from the first Space Shuttle to the first probes that went to the outer planets...and beyond. The engaging text showcases Moore's trademark clarity, simplicity, passion, and authority, and Arnold's photographs capture the drama, scale, majesty, and minutiae of the Universe. Also included: a countdown of the 50 Greatest Ever

Space Images as chosen by Arnold.

The American Stamp Laura Goldblatt, Richard Handler. 2023-02-13 More than three thousand different images appeared on United States postage stamps from the middle of the nineteenth century to the end of the twentieth. Limited at first to the depiction of a small cast of characters and patriotic images, postal iconography gradually expanded as the Postal Service sought to depict the country's history in all its diversity. This vast breadth has helped make stamp collecting a widespread hobby and made stamps into consumer goods in their own right. Examining the canon of nineteenth- and twentieth-century American stamps, Laura Goldblatt and Richard Handler show how postal iconography and material culture offer a window into the contested meanings and responsibilities of U.S. citizenship. They argue that postage stamps, which are both devices to pay for a government service and purchasable items themselves, embody a crucial tension: is democracy defined by political agency or the freedom to buy? The changing images and uses of stamps reveal how governmental authorities have attempted to navigate between public service and businesslike efficiency, belonging and exclusion, citizenship and consumerism. Stamps are vehicles for state messaging, and what they depict is tied up with broader questions of what it means to be American. Goldblatt and Handler combine historical, sociological, and iconographic analysis of a vast quantity of stamps with anthropological exploration of how postal customers and stamp collectors behave. At the crossroads of several disciplines, this book casts the symbolic and material meanings of stamps in a wholly new light.

Women Spacefarers Umberto Cavallaro.2017-03-02 This book tells the fascinating stories of the valiant women who broke down barriers to join the space program. Beginning with the orbital flight of USSR cosmonaut Valentina Tereshkova in 1963, they became players in the greatest adventure of our time. The author contextualizes their accomplishments in light of the political and cultural climate, from the Cold War in the background to the changing status of women in society at large during the Seventies. The book includes the biographies of, and in some cases interviews with, the sixty women who flew in space in the first half century of space history. It reports their achievements and some little known details. The result is a gallery of pioneering women who reached for the stars: women who, with exceptional skill, hard work, and dedication, reached impressive careers as accomplished pilots, researchers, and engineers; many are now in high level managerial positions both at NASA or in public and private organizations, and all left a legacy of strength.

The Rocket into Planetary Space Hermann Oberth.2014-10-22 For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

American Astrophilately Senior Information Advisor for Photographic Collection David Ball, MD Franzcr, Beatrice Bachmann. 2010-02-26 This uniquely American story of the conquest of space is traced by stamp collectors who enjoy aerospace history. By exhibiting envelopes that are postmarked near launch pads, mission control centers, and on recovery ships Astrophilatelists tell an amazing tale of new sailing ships on a vast new ocean. *American Astrophilately* assists beginner and advanced collectors in identifying envelopes which meet the International Philatelic Federation (FIP) guidelines for exhibition at stamp shows. More than a dozen experts have contributed articles to explain NASA official marks, tracking ships, prime recovery ships, and why some postmarks are preferred over others. Part two shows hundreds of envelopes in full color appropriate for exhibition and the artist responsible for the cachet. Part three shows the most important part - the postmark. Machine and hand cancels from launch, mid-mission and recovery are shown from the Explorer 1

launch in 1958 through the X-Prize civilian spaceflight in 2004. The appendices contain more than 700 pages of useful reference spreadsheets, lists, and charts. Sample award winning exhibits are included as well as guidelines and regulations from the FIP and US Postal Service. A landmark volume useful to all space event cover collectors and budding astrophilatelists.

Gus Grissom Ray E. Boomhower.2004 Selected as one of NASA's original Seven Mercury Astronauts, Gus Grissom would go on to become the first man to fly in space twice and later give his life to the NASA space program. This book unearths the story of Indiana's first astronaut by offering a more complete picture of Grissom's life and character and the events that led up to his death. In the most comprehensive biography on the subject yet, Gus Grissom: The Lost Astronaut offers a more personal side and fuller picture of Grissom's life and character. Hours were spent interviewing Grissom's family and friends, who were all more than eager to talk about the astronaut, sharing in the belief that this story is one worth telling to a new generation that knows little about his illustrious career.

Stamping Through Astronomy Renato Dicati.2013-06-18 Stamps and other postal documents are an attractive vehicle for presenting astronomy and its development. Written with expertise and great enthusiasm, this unique book offers a historical and philatelic survey of astronomy and some related topics on space exploration. It contains more than 1300 color reproductions of stamps relating to the history of astronomy, ranging from the earliest observations of the sky to modern research conducted with satellites and space probes. Featured are the astronomers and astrophysicists who

contributed to this marvelous story - not only Ptolemy, Copernicus, Kepler, Newton, Herschel, and Einstein but also hundreds of other minor protagonists who played an important role in the development of this, the most ancient yet the most modern of all the sciences. The book also examines in depth the diverse areas which have contributed to the history of astronomy, including the instrumentation, the theories, and the observations. Many stamps illustrate the beauty and the mystery of celestial objects: galaxies, nebulae, stars, planets, satellites, comets, and minor celestial bodies.

The Light of Earth Al Worden, Francis French. 2021-11 Apollo 15 command module pilot Al Worden was one of the highest-profile personalities among the Apollo astronauts, renowned for his outspokenness and potent views but also recognized as a warm and well-liked person who devoted much of his life after retiring from NASA to sharing his spaceflight experiences. Worden had nearly finished writing this book before his passing in 2020 at the age of eighty-eight. Coauthored with spaceflight historian Francis French, *The Light of Earth* is Worden's wide-ranging look at the greatest-ever scientific undertaking, in which he was privileged to be a leading participant. Here Worden gives readers his refreshingly candid opinions on the space program, flying to the moon, and the people involved in the Apollo and later shuttle programs, as well as sharing hard-hitting reflections on the space shuttle program, the agonies and extraordinary sights and delights of being a NASA Apollo astronaut, and the space program's triumphs and failures. Worden delves into areas of personal grief that reveal the noble and truly human side of the space program's earliest years. He does not hold back when discussing the shocking deaths of his fellow astronauts in the three major tragedies that struck the space agency, nor does he shy away from sharing his personal feelings about fellow Apollo astronauts including Neil Armstrong and Buzz Aldrin. Worden was

known as a charismatic speaker and one of the most thoughtful Apollo astronauts. His candid, entertaining, and unique perspective in *The Light of Earth* will captivate and surprise.

NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick, National Aeronautics and Space Administration. 2010-07-07 On 29 July 1958, President Dwight D. Eisenhower signed the National Aeronautics and Space Act, creating the National Aeronautics and Space Administration (NASA), which became operational on 1 October of that year. Over the next 50 years, NASA achieved a set of spectacular feats, ranging from advancing the well-established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight. In the midst of the geopolitical context of the Cold War, 12 Americans walked on the Moon, arriving in peace “for all mankind.” Humans saw their home planet from a new perspective, with unforgettable Apollo images of Earthrise and the “Blue Marble,” as well as the “pale blue dot” from the edge of the solar system. A flotilla of spacecraft has studied Earth, while other spacecraft have probed the depths of the solar system and the universe beyond. In the 1980s, the evolution of aeronautics gave us the first winged human spacecraft, the Space Shuttle, and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars. With the Apollo fire and two Space Shuttle accidents, NASA has also seen the depths of tragedy. In this volume, a wide array of scholars turn a critical eye toward NASA’s first 50 years, probing an institution widely seen as the premier agency for exploration in the world, carrying on a long tradition of exploration by the United States and the human species in general. Fifty years after its founding, NASA finds itself at a crossroads that historical perspectives can only help to illuminate.

Stars & Planets Janet Borg.2006 With this gorgeously illustrated book and activity set, kids can fly into outer space and take a guided tour of the sparkling night sky. It features so many appealing elements that make the astronomical journey special: a poster of the solar system, reusable planet stickers to place on the poster, a map of the constellations, and more than 100 glow-in-the-dark star stickers. And it's all nicely packaged in an envelope bound into the book's front cover. The trip begins with the sun, and then it's on to the moon and an exploration of its cycles. Move farther out to gaze upon the stars and map out the constellations. Finally, children return to Earth to gain an understanding of our own special place in the solar system.

The Race to the Moon Chronicled in Stamps, Postcards, and Postmarks Umberto Cavallaro.2018-10-05 The story of the famed race to the Moon between the US and the USSR has been told countless times. The strategies of these two superpowers have often been paralleled in a way that highlights their fight for dominance and efforts to develop needed new technologies. This book will show how beneath these surface similarities, the two competing nations employed very different core tactics. It provides a new perspective of the history of the space race by analyzing that history through philately - that is, from the images on postage stamps, post cards, and letters in circulation at that time. Through this fascinating historical visual record, the author shows how the propaganda-heavy approach of the USSR eventually lost out to the more pragmatic approach of the United States.
