Murach's Java SE 6 Joel Murach, Andrea Steelman. 2007 This book teaches how to develop Java applications at the professional level. It starts by showing how to code, test, and debug everyday business applications that won't crash. It presents object-oriented features like classes, inheritance, interfaces, and polymorphism in a way that's both understandable and useful in the real world ...perspective that's often missing in Java training. It presents essential Java skills such as working with data types, control statements, arrays, collections, generics, enumerations, exceptions, threads, Swing components, applets, and text and binary files. It covers new Java SE 6 features such as new JDBC features, the StAX XML API, and the built-in Derby database. And it's all done in the distinctive Murach style that has been training professional programmers for more than 30 years.

Critical Infrastructure Protection III Charles Palmer, Sujeet Sheno. 2009-10-01 The information infrastructure - comprising computers, embedded devices, networks and software systems - is vital to operations in every sector: information technology, telecommunications, energy, banking and finance, transportation systems, chemicals, agriculture and food, defense industrial base, public health and health care, national monuments and icons, drinking water and water treatment systems, commercial facilities, dams, emergency services, commercial nuclear reactors, materials and waste, postal and shipping, and government facilities. Global business and industry, governments, indeed - ciety itself, cannot function if major components of the critical information infrastructure are degraded, disabled or destroyed. This book, Critical Infrastructure Protection III, is the third volume in the annual series produced by IFIP Working Group 11.10 on Critical Infrastructure Protection, an active international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts related to critical infrastructure protection. The book presents original research results and innovative applications in the area of infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. This volume contains seventeen edited papers from the Third Annual IFIP Working Group 11.10 International Conference on Critical Infrastructure Protection, held at Dartmouth College, Hanover, New Hampshire, March 23-25, 2009. The papers were refereed by members of IFIP Working Group 11.10 and other internationally-recognized experts in critical infrastructure protection.

Chemoinformatics Johann Gasteiger, Thomas Engel. 2006-12-13 This first work to be devoted entirely to this increasingly important field, the

Textbook provides both an in-depth and comprehensive overview of this exciting new area. Edited by Johann Gasteiger and Thomas Engel, the book provides an introduction to the representation of molecular structures and reactions, data types and databases/data sources, search methods, methods for data analysis as well as such applications as structure elucidation, reaction simulation, synthesis planning and drug design. A hands-on approach with step-by-step tutorials and detailed descriptions of software tools and Internet resources allows easy access for newcomers, advanced users and lecturers alike. For a more detailed presentation, users are referred to the Handbook of Chemoinformatics, which will be published separately. Johann Gasteiger is the recipient of the 1991 Gmelin-Beilstein Medal of the German Chemical Society for Achievements in Computer Chemistry, and the Herman Skolnik Award of the Division of Chemical Information of the American Chemical Society (ACS) in 1997. Thomas Engel joined the research group headed by Johann Gasteiger at the University of Erlangen-Nuremberg and is a specialist in chemoinformatics.

On Criminalization J. Schonsheck.2013-06-29 I begin by introducing the main issues of the work, and inviting their consideration; as enticement, I offer a sketch of their practical importance, and of the philosophical challenge they present. And I provide a preview of the work's organization and central argument. There is something so obvious that it is easily-and often-overlooked: the enforcing of criminal statutes is the most intrusive and coercive exercise of domestic power by a state. Forcibly preventing people from doing that which they wish to do, forcibly compelling people to do that which they do not wish to do-and wielding force merely attempting to compel or prevent-these state activities have extraordinarily serious ramifications. Indeed, no state institutions are likely to have more profound an impact on the lives of individual citizens than those of the criminal justice system. I endorse Herbert Packer's assessment: The criminal sanction is the law's ultimate threat. Being punished for a crime is different from being regulated in the public interest, or being forced to compensate another who has been injured by one's conduct, or being treated for a disease. The sanction is at once uniquely coercive and, in the broadest sense, uniquely expensive. As a consequence, these state activities are in special need of moral warrant. Given the great potential for doing grave injustice, the power of the state embodied in the criminal justice system ought not be exercised in the absence of a complete and compelling moral justification.

The Art of Forgetting Adrian Forty, Susanne Küchler. 2001-07-01 In tracing the process through which monuments give rise to collective memories, this path-breaking book emphasizes that memorials are not just inert and amnesiac spaces upon which individuals may graft their ever-shifting memories. To the contrary, the materiality of monuments can be seen to elicit a particular collective mode of remembering which shapes the consumption of the past as a shared cultural form of memory. In a variety of disciplines over the past decade, attention has moved away from the oral tradition of memory to the interplay between social remembering and object worlds. But research is very sketchy in this area and the materiality of monuments has tended to be ignored within anthropological literature, compared to the amount of attention given to commemorative practice. Art and architectural history, on the other hand, have been much interested in memorial representation through objects, but have paid scant attention to issues of social memory. Cross-cultural and interdisciplinary in scope, this book fills this gap and addresses topics ranging from material objects to physical space; from the contemporary to the historical; and from high art to memorials outside the category of art altogether. In so doing, it represents a significant contribution to an emerging field.

Valley of the Sorcerers Kamal Abdulla. 2014 Kamal Abdulla is a well-known Azerbaijani writer and scholar. He has written works on linguistics, culturology and mythology, and is the author of poetry, essays, plays, stories, and novels. His prose has been published and translated into French, Turkish, Russian, English, Portuguese, German, Polish, Bulgarian, Georgian, Arabic, Lithuanian, Japanese, and other languages. His plays have been performed in Azerbaijan, Georgia, and Estonia. His work is not without its detractors. Many articles and books have been written about his work, some positive, some negative. He has won literary awards in his own country, and been subject to unfair criticism. In the early years of Azerbaijan's independence, liking his novels was considered a sign of good literary taste. In later years, not liking these works is considered a sign of good literary taste. Original language, world view, philosophical foundation, and mythological sense characterize his work. His writing features mountains invisible to the eye, and valleys of sorcerers where it is forever spring. Here ancient manuscripts come to life and history is re-read in a completely different way. Centaurs roam his favourite city, Baku, while in ancient Egypt, people turn into flowers, and flowers into people. The idolized heroes of his mythological texts are fleshed out as ordinary, everyday people. Sometimes dead people emerge from their images, restore justice, and then return to their images. Not satisfied with living in their own worlds, characters lead very different lives in parallel worlds. The story of Theseus and the Minotaur enters our own time, and finally the phantasmagoria reaches such a point that Paris gives the apple to Hera, not Aphrodite...

Fundamentals of Organic Chemistry John McMurry. 1998 Written for the short course--where content must be thorough but to-the-point--

Fundamentals of Organic Chemistry provides an effective, clear, and readable introduction to the beauty and logic of organic chemistry. McMurry presents only those subjects needed for a brief course while maintaining the important pedagogical tools commonly found in larger books. With clear explanations, thought-provoking examples, and an innovative vertical format for explaining reaction mechanisms, Fundamentals takes a modern approach: primary organization is by functional group, beginning with the simple (alkanes) and progressing to the more complex. Within the primary organization, there is also an emphasis on explaining the fundamental mechanistic similarities of reactions. Through this approach, memorization is minimized and understanding is maximized.

Science Teachers' Learning National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Teacher Advisory Council, Board on Science Education, Committee on Strengthening Science Education through a Teacher Learning Continuum. 2016-01-15 Currently, many states are adopting the Next Generation Science Standards (NGSS) or are revising their own state standards in ways that reflect the NGSS. For students and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom. Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. *Science Teachers' Learning* provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. *Science Teachers' Learning* will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science.

Strategies for Work With Involuntary Clients Ronald H. Rooney. 2009-01-28 Involuntary clients are required to see a professional, such as juveniles on probation, or are pressured to seek help, such as alcoholics threatened with the desertion of a spouse. For close to two decades, *Strategies for Work with Involuntary Clients* has led in its honest analysis of the involuntary transaction, suggesting the kind of effective legal and ethical intervention that can lead to more cooperative encounters, successful contracts, and less burnout on both sides of the treatment relationship. For this second edition, Ronald H. Rooney has invited experts to address recent theories and provide new information on the best practices for specific populations

and settings. He also adds practical examples and questions to each chapter to better facilitate the involvement of students and readers, plus a section on motivational interviewing.

The Political and Socioeconomic Transformation of Turkey Atila Erlap, Muharrem Tunay, Birol Yesilada. 1993-08-18 The decade of the 1980s marked a crucial turning point in Turkey's socioeconomic structure and polity. At the heart of the socioeconomic transformation lay the January 24, 1980, economic austerity package and the September 12, 1980, coup d'etat, both of which altered not only the Turkish economy and societal structure but the political system and external relations as well. The meanings of right and left, modernity and backwardness, and of Turkishness were completely revised. This book shows the nature of this socioeconomic and political transformation and assesses the success and failure of relevant policies as the country prepares to enter the 21st century.

The New Georgia Gachechiladze, Revaz, Revaz Gachechiladze Tbilisi State University, Georgia. 2014-01-17 A comprehensive book on the social and political geography of one of the most distinctive newly independent States to emerge from the collapse of the Soviet Union. Being one of the most developed Soviet republics in terms of levels of welfare, education and cultural activity, Georgia is fiercely defending its national self-identity and striving for independence. The difficult process of building a nation-State and of concurrent dramatic social changes has led in the 1990s to serious complications in its development, even to the point of several civil wars. But there are signs that the crisis will be overcome before long.

Global Status Report on Road Safety 2018 World Health Organization. 2019-01-10 The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

Pushing Electrons Daniel P. Weeks. 2013-01-01 This brief guidebook assists you in mastering the difficult concept of pushing electrons that is vital to your success in Organic Chemistry. With an investment of only 12 to 16 hours of self-study you can have a better understanding of how to write resonance structures and will become comfortable with bond-making and bond-breaking steps in organic mechanisms. A paper-on-pencil approach uses active involvement and repetition to teach you to properly push electrons to generate resonance structures and write organic mechanisms with a minimum of memorization. Compatible with any organic chemistry textbook. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
