Inventive Weaving on a Little Loom by Syne Mitchell (2015) - Rigid-heddle weaving is simple to learn, easy to master, and offers a lifetime of possibilities to discover! This book covers everything rigid-heddle weavers need to know about the craft, from the basics — how to select a loom, set it up, and get started — to a wide variety of fun techniques that yield beautiful results. It includes projects from pillows and curtains to bags, shawls, and even jewelry, and explores techniques like warp-face patterning, weft-pile weaving, weaving with fine threads, woven shibori, shadow weave, and the textural effects you can create with different yarns and with wire and conductive thread. Everything you need to know is here, with fully illustrated step-by-step instructions to ensure success.
particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

*Understanding and Improving the Durability of Textiles* Patricia A Annis.2012-09-11 The ability of a fabric to resist wear is an essential aspect of its performance. Understanding and improving the durability of textiles provides a comprehensive guide to the factors affecting the durability of a range of different textiles. Part one addresses the different factors that affect textile durability, including the influence of fabric construction and fibre type, as well as properties affecting strength and dimensional stability. Colour fastness and the effects of light are discussed, along with methods for testing and improving wrinkle-resistance and textile durability. Part two goes on to explore the durability of particular types of textile including antimicrobial textiles, protective clothing, historic textiles, silk and geotextiles. With its distinguished editor and international team of expert contributors, *Understanding and improving the durability of textiles* is an indispensable book for textile scientists, technologists, engineers and those designing, testing and manufacturing textiles. It also provides a comprehensive guide to textile durability for researchers and academics of all levels in this sector. Provides a comprehensive guide to the factors affecting the durability of a range of different textiles Discusses colour fastness and the effects of light, and methods for testing and improving wrinkle-resistance and textile durability Explores the durability of particular types of textile

Emerging Sustainable and Renewable Composites A. Atiqah, S. M. Sapuan, R. A. Ilyas, Z. M. A. Ainun, K. Z. Hazrati.2024-07-03 This edited volume presents a comprehensive discussion of emerging sustainable and renewable composites from tropical fibres and provides an in-depth analysis of their prospective applications as replacements for conventional petroleum-based packaging and the challenges regarding this. Readers will gain a comprehensive understanding of the development and characterization of sustainable and renewable composites from fibres such as sugar palm, kenaf, sisal, curau, and coir. They will also learn about new potential materials from such fibres and their potential use in various nanoelectronics applications. Each chapter provides recent insight from some of the field’s most prominent industry and academic professionals. Chapter contributors present valuable case studies and describe related environmental issues, environmental advantages, and challenges. Topics include biodegradability, tensile and other physical properties, and applications. Consequently, readers can apply this knowledge to the further development of sustainable and renewable composites toward their global use in place of petroleum-based materials and in new electronics products. This book is an invaluable and accessible guide for researchers and postgraduate students of composites engineering and nanotechnology who wish to learn more about composites from tropical fibres and their applications. The practical information will benefit those who wish to advance research in this field and promote the adoption of these materials in areas including packaging and nanoelectronics.

What Do We Need a Union For? Timothy J. Minchin. 2000-11-09 The rise in standards of living throughout the U. S. in the wake of World War II brought significant changes to the lives of southern textile workers. Mill workers' wages rose, their purchasing power grew, and their economic expectations increased--with little help from the unions. Timothy Minchin argues that the reasons behind the failure of textile unions in the postwar South lie not in stereotypical assumptions of mill workers' passivity or anti-union hostility but in these large-scale social changes. Minchin addresses the challenges faced by the TWUA--competition from nonunion mills that matched or exceeded union wages, charges of racism and radicalism within the union, and conflict between its northern and southern branches--and focuses especially on the devastating general strike of 1951. Drawing extensively on oral histories and archival records, he presents a close look at southern textile communities within the context of the larger history of southern labor, linking events in the textile industry to the broader social and economic impact of World War II on American society.

Physical Testing of Textiles B P Saville.1999-01-08 This book examines the physical testing of textiles in the form of fibre, yarn and fabric, the emphasis throughout being on standard and reproducible tests. After an introductory explanation of sampling and measurement, the author explores the effects of moisture on textiles, then goes on to discuss fibre dimension, yarn tests for linear density, twist, evenness and hairiness, tensile strength, and dimensional stability and serviceability. Also covered are aspects of comfort and fabric handle, colour fastness and quality assurance. The book’s comprehensive coverage of the physical properties of textiles makes it an essential reference for managers in the textiles industry concerned with quality assurance, garment and fabric technologists, and students of textile science and engineering.

From the 21st Century B.C. to the 21st Century A.D. Steven J. Garfinkle, Manuel Molina.2013-12-02 This volume collects the proceedings of a three-day conference held in Madrid in July 2010, and it highlights the vitality of the study of late-third-millennium B.C. Mesopotamia. Workshops devoted to the Ur III period have been a feature of the Rencontre Assyriologique Internationale roughly every other year, beginning in London in 2003. In 2009, Steve Garfinkle and
Manuel Molina asked the community of Neo-Sumerian scholars to convene the following year in Madrid before the Rencontre in Barcelona. The meeting had more than 50 participants and included 8 topical sessions and 27 papers. The 21 contributions included in this volume cover a broad range of topics: new texts, new interpretations, and new understandings of the language, culture, and history of the Ur III period (2112–2004 B.C.). The present and future of Neo-Sumerian studies are important not only for the field of Assyriology but also for wider inquiries into the ancient world. The extant archives offer insight into some of the earliest cities and one of the earliest kingdoms in the historical record. The era of the Third Dynasty of Ur is also probably the best-attested century in antiquity. This imposes a responsibility on the small community of scholars who work on the Neo-Sumerian materials to make this it accessible to a broad, interdisciplinary audience in the humanities and related fields. This volume is a solid step in this direction.

**Textile Technology** Thomas Gries, Dieter Veit, Burkhard Wulfhorst. 2015-01-15 Textile Technology is a unique and readable introduction into the field of textile engineering. It is based on an elementary level course focusing on the manufacture (processes and machines) of yarn, fabric, knitwear, nonwovens, braids, reinforcing fabrics, and technical textiles, but also provides technicians and engineers in the textile industry with an up-to-date review of processes and equipment for textile manufacturing. The book covers all processing steps for the manufacturing of textiles, describing materials, processes and machines, finishing, making-up, and recycling. To provide a better understanding of the individual textile processes, each chapter ends with an example describing the respective processing steps for a specific textile product. In addition, current and future development trends are discussed. The second edition is brought up to date with extensive coverage of new developments, such as in the fields of testing, measurement, and simulation. Contents • Raw
materials • Yarn production • Fabric production • Knitwear production • Nonwovens production • Braiding processes and machines • Noncrimp fabrics • Textile finishing • Clothing manufacture • Technical textiles • Textile testing • Disposal and recycling • Simulation
